IMPORTANT FINDS AT GOLDFIELD CON

Deepest Workings in District Show Ore of Increasing Values in Gold.

LEASERS MAKING SPLENDID PROGRESS

Camp's List of Shipping Properties Now Being Added to Steadily.

GOLDFIELD, Nev., March 10 .- An important announcement in the February report of Manager J. R. Finlay of the report of Manager J. R. Finlay of the Goldfield Consolidated mines, is that the extension of the 750-foot level from the Clermont has entered the main Mohawk ere channel, running parallel to the great Clermont vein, and ore of good quality is exposed 150 feet deeper than heretofore developed in the Mohawk. The ore samples, as broken for holsting, vary from \$10 to \$20, with the characteristic seams of high-grade. This ore channel is about 400 feet from the rich shoot exposed in the Clermont workings, and while development is not sufficiently far advanced to determine its value it bears every indication of maintaining the quality and volume opened on the levels above. The most mementous news in the camp in recent times, and perhaps in all time, was the announcement that the ore had been exposed on the 1000-foot level of the Clermont, the deepestworkings in the district. The vein at this depth shows a constant improvement as the drift progresses, the assays running to six ounces gold and the mine car average being around \$45 per ton, with the usual seams of exceedingly rich telluride, and even less copper than occurs at some points near the surface.

Beyond question the richest showing of gold ore to be seen, in any mine in the world today is at the 750-level of the Clermont workings of the Consolidated. In the faces, walls and tops of the great stopes may be seen the seams of shining dark quartz, some of which is almost one-half pure gold, and the average product has been so rich that it has been necessary to mix it with material of low grade from the walls and from other parts of the company's mines. The Clermont alone is now capable of producing \$50 tons of ore daily, and the ore trains on the company's standard gauge railroad are kept busy haulling the product from the four working standard gauge railroad are kept busy haulling the product from the four working standard gauge railroad are kept busy hauling the product from the four working in the cars and is properly blended in passing through the sampler in o Goldfield Consolidated mines, is that the

Tonnages Increased.

Tomages Increased.

Despite the fact that the additional machinery, the installation of which increased the capacity of the mill from \$50 to 900 tons daily, was put in operation only four days before the first of the year, the January treatment averaged well above \$50 tons daily, and shows a gratifying advance during the past menth. New development work, which in January amounted to \$53 linear feet, has been continued in proportionate volume, but estimates of new ore reserves rendered available have not yet been made public. By far the greater amount of new work has been devoted to following the known ore-bearing veins and developing and blocking out ore bodies in these channels. Production from the Combination mine has increased largely since repairs to the levels in the caved area about the Hampton stope were completed.

Occasional shipments of good ore are made from the Goldfield Belmont, north of the Daley. The Vellow Tires shaft

completed.

Occasional shipments of good ore are made from the Goldfield Belmont, north of the Dalay. The Yellow Tiger shaft has been unwatered to the 700-700t level and repairs are being made to air pipes and other fixtures in preparation for extensive development at the 600 and 700 levels, where large voins of low grade material were opened last year. The Nancy Donuldson, in the eastern part of the district, is drifting on a vein carrying seams of pay ore, and recently a larger deposit of good ore was opened by the drift. Shipping one is being taken from the company workings of the Diamonfield Black Butte in the original adit on the north side of the Butte, from which a raise is being driven to tap the cre-shoot exposed by lessees, and from which the latter have made several shipments averaging well above \$100 per ton. Company work will be reaumed on the Grandma shortly under the direction of Henry Weber.

Some New Leasers.

Some New Leasers.

A notable revival in leasing operations has been apparent throughout the district during the past two months, during which period at least thirty new leases have begun work at points scattered over a wide area. Several important discoveries of ore have already resulted from this work, the most noteworthy of which is the opening of three feet of shipping ore at a depth of \$80 feet in the Annex shaft on the Poleverde claim, the joint property of the Consolidated and Jumbo Extension companies. The Annex lease, operated by Philadelphia men and managed by E. C. Watson of Goldneid, has a three-compartment shaft and excellent equipment and has installed ore bins and a six-drill compressor. Drifts are being driven on the vein cast and west and a raise is following up the ore on its dip. This vein is apparently independent of either the main Mohawk or Jumbo veins, and the discovery is regarded as one of the most important of recent times in the district.

Shipments are now being made regularly from the Gold Bar workings of the C. O. D. Consolidated by W. F. Gray, B. E. Thomas and associates, who have secured a five-vear lease on the Gold Bar and who will soon creet a 50-ton mill on the ground. In further opening up the old workings, which have produced a large amount of rich ore in the past, ore of excellent grade was exposed at several points on the 150, 200 and 350-foot levels, and in addition to the ore of shipping quality there is a large tounage exposed of excellent free milling ore which will be immediately available for the mill. The lessees are using machine drills and have a large force of men at work.

OHIO COPPER WILL COMPLETE BIG MILL

A special over the Pollock wires Thursday was to the effect that the Ohio Copper company has raised \$500,000 on the \$750,000 worth of treasury bonds. There was previously outstanding \$1.250,000 worth of bonds, all of which are convertible into stock at \$10 per share. The raising of this money virtually assures the completion of the company's mill at Lark, the first units of which have been doing very satisfactory work since their commissioning some months ago. Manager McIntosh was at the plant Thursday, and it is understood that all plans and specifications are in readiness, so that the work on the colarging of the plant may be started in the very near future. The plan is to increase the capacity of the concentrator from 1500 tons to \$500 tons per day. The Ohio company is said to be making at present about \$1500 per day profit.

UTAH OFFICIALS ON NEVADA CON. BOARD

What doubt may have existed as to the probabilities of the Utah Copper forces having influence and position in the affairs of the Nevada Consolidated company was dispelled Thursday by the information which came over the Pollock wires from New York, as follows:
"At a meeting of Nevada Consolidated Copper company directors, the Guggenheim interests elected to the directorate, C. M. MacNeill, president of the Utah Copper company; D. C. Jackling, general manager of the Utah Copper company, and S. R. Guggenheim, to take the places made vacant by the resignations of F. W. Hills, Judd Stewart and John Steele.

PRICES WERE SOME **WEAKER ON THURSDAY**

in Decline Through Adverse Reports.

Prices on the local market slumped off to some extent Thursday. The failire of the Sloux Con. directors to declare the anticipated dividend naturalhad a depressing effect on the stock f that company, though the reaction was not as great as many had anticipated it would be. The stock closed on sales at 40 cents and 394 cents, seller. Though the Columbus Con. assessment had not been levied before the close of the call in the afternoon, there have been rumors of the impending "Irisher" for some time, and these rumors developed into practical facts Thursday. As a result, the stock sold down as low as

a result, the stock sold down as low as 46 cents, from an opening in the morning at 50 cents. Iron Blossom at 34 cents and Colorado at 58 cents were but lightly traded in.

On the strength of their dividents Grand Central and Victoria were somewhat stronger, though sales were light.

Opex, among the unlisteds, bids fair to regain its standing, selling Thursday as high as 64 cents buyer, and the Ely securities are also in demand at favorable prices. Closing quotations and sales Thursday

TUNNELED FOR WATER;

Special to The Tribune.

PROVO, March 10.—F. W. C. Hathenbruck, while driving a tunnel to develop a stream of water in Slate canyon, just east of Provo. Is reported to have struck a vein of gold-bearing quartz. The tunnel is in five feet and is in vein matter the entire length. The ore is now in the hands of an assayer and the results are awalted with much interest.

Mineralized ledges, which exist on the north and south of the canyon, from the bottom up each side, are believed to contain good paying copper and gold ore. Tunnels run into the mountains on either side of the canyon will tap these veins several hundred feet below the surface croppings. The Moore brothers of this city have located and worked some claims along the ledge, and Jesse Knight, the hulning wizard, has now a controlling interest in these properties and is furnishing the means for development.

Ore Shipments.

Ore shipments reported by the Utah Ore Sampling company Thursday fol-low: Utah ores, 14 cars, Idaho ores, 2 cars,

ASSESSMENT LEVIED ON COLUMBUS STOCK

Sioux Con. and Columbus Lead Grand Central and Victoria Are Company Will Meet Indebtedness and Continue Development Work.

No Extraction.

No Extraction.

On account of the disabiling of the tramway from the mine to the shipping point, by snowslides, and the very poor condition of the mountain roads, no effort at ore extraction will be made for the next einety days at least, the management intending to devote its entire attention to the further development of the company's territory. The indications for new and large ore bodies are very favorable, it is said, and the management is far from being discouraged as to the future.

SUCCESSFUL WINTER SLUICING IN ALASKA

SEATTLE, Wash., March 10.—For the first time in the history of placer mining in Alaska winter sluicing has been successfully carried on in the Tanana district, word to this effect having been prought to Seattle by Knute Larson and Albert Halfinner, two minets who came down on the steamship Victoria and deposited \$175,000 in gold in a local bank yesterday. The gold brought by the miners represents their winter cleanup and comes from Esty creek in the Fairbanks district, where Larson and Halfinner worked throughout the winter without interruption.

Larson and Halfinner commenced sintleng in October and kept at it continually, with day and night shifts operating even when the thermometer stood between 50 and 60 degrees below zero.

Mining Notes.

Fred T. Williams, mining engineer of Park City, was in Salt Lake Thursday on his way home after a brief visit in Butte.

Butte.

E. W. Hulse has returned to Ely after a brief business visit in this city.

Hugh McGarry, manager of the Golden Cycle mine and mill at Cripple Creek. Colo. was in this city Thursday on his way home from Goldfield, Nev., where he was called by the death of his brother. The Golden Cycle is one of the foremost gold mining properties in the country, and has for a long time been much in the public eye on account of its wonderful records.

At directors' meetings of the Knight ompanies held in Provo Thursday as-
